Product Description

StemSpan™ CD34+ Expansion Supplement (10X) contains a combination of recombinant human cytokines and other additives formulated to selectively promote the expansion of CD34+ cells isolated from human cord blood (CB) or bone marrow (BM) samples.

StemSpan™ CD34+ Expansion Supplement (10X) is intended for use in combination with any of the following StemSpan™ media:
- StemSpan™ SFEM (Catalog #09600)
- StemSpan™ SFEM II (Catalog #09605)
- StemSpan™-XF (Catalog #100-0073)
- StemSpan™-AOF (Catalog #100-0130)

Advantages:
- Formulated to selectively expand and produce large numbers of human CD34+ hematopoietic cells in liquid cultures initiated with CD34+ CB or BM cells
- Optimized for use with StemSpan™ media. When combined with StemSpan™ SFEM II in particular, supports at least 50% higher expansion of CD34+ human CB cells compared to other serum-free media
- Supplied as a 10X concentrate. After thawing and mixing, the tube contents can be added directly to any hematopoietic cell expansion medium of choice.

Properties

Storage: Store at -20°C to -70°C.
Shelf Life: Stable until expiry date (EXP) on label.
Contains:
- Recombinant human fms-like tyrosine kinase 3 ligand (Flt3L)
- Recombinant human stem cell factor (SCF)
- Recombinant human interleukin 3 (IL-3)
- Recombinant human interleukin 6 (IL-6)
- Recombinant human thrombopoietin (TPO)
- Other additives

Directions for Use

PREPARATION OF COMPLETE MEDIUM

1. Thaw StemSpan™ CD34+ Expansion Supplement (10X) at room temperature (15 - 25°C) until just thawed. Mix thoroughly.
   NOTE: Once thawed, store supplement at 2 - 8°C for up to 1 month. Alternatively, aliquot and store at -20°C. After thawing aliquots, do not re-freeze.
2. Add StemSpan™ CD34+ Expansion Supplement (10X) to culture medium at a 1 in 10 dilution (e.g. add 10 mL of Supplement to 90 mL of culture medium). Mix thoroughly.

RECOMMENDED PROTOCOL FOR CD34+ CELL EXPANSION WITH StemSpan™ MEDIA

For optimal performance, use one of the following StemSpan™ media in this protocol:
- StemSpan™ SFEM II (Catalog #09605)
- StemSpan™-AOF (Catalog #100-0130)

1. Thaw StemSpan™ medium at room temperature (15 - 25°C) or overnight at 2 - 8°C. Mix thoroughly.
   NOTE: If not used immediately, aliquot into tubes and store at -20°C. Once aliquots are thawed, do not re-freeze.
2. Prepare complete medium as described in the Preparation section, using a StemSpan™ medium as the culture medium.
OPTIONAL: Add UM729 (Catalog #72332) to a final concentration of 1 μM; titration may be required to determine the optimal concentration for CD34+ cell expansion. UM729 enhances expansion of CD34+ cells, in addition to more primitive subsets such as CD34+CD90+CD45RA- cells.

3. Thaw cryopreserved CD34+ cells, or use an EasySep™ kit to isolate CD34+ cells from fresh whole CB or BM, or from cryopreserved CB or BM mononuclear cells (MNCs), as indicated below:
   - For fresh whole CB, use EasySep™ Human Cord Blood CD34 Positive Selection Kit II (Catalog #17896)
   - For fresh BM, or frozen BM or CB MNCs, use EasySep™ Human CD34 Positive Selection Kit II (Catalog #17856)

4. **Day 0**: Plate CD34+ cells in complete medium with or without UM729 (prepared in step 2). Refer to Table 1 for recommended plating concentrations; optimal cell concentrations and cultureware are dependent on experimental objectives and cell quality.

</table>

*Both tissue culture-treated and non-tissue culture-treated are suitable.

5. Incubate at 37°C and 5% CO₂.

6. **Day 3 or 4**: Add an equal volume of fresh complete medium or perform a half-medium change.

7. **Day 7**: Harvest cells for evaluation or downstream applications. Count total viable cells using Trypan Blue (Catalog #07050) and a hemocytometer (or an automated cell counting method), and measure CD34+ expression by flow cytometry. Additional immunophenotyping may be performed to identify CD34+ cell subsets and/or differentiated CD34- cells.

**NOTE:** A 7-day culture period is optimal for cell yield, CD34 expression, and progenitor cell function. Shorter culture periods of 24 - 72 hours may be used if preserving CD34+ expression and progenitor cell function is desired over high cell yield. Culturing beyond 7 days can be considered if high cell yields are desired. However, CD34 expression and progenitor cell function is reduced with longer culture times, due to cell differentiation.

**If culturing for > 7 days:** Cultures can be continued for an extended period of time with periodic dilution every 3 - 4 days to maintain a cell concentration < 1 x 10^5 cells/mL.

**NOTE:** Antigen expression on cultured cells may not be as predictive for determining non-differentiated status or lineage potential compared to antigen expression on CD34+ cells that have not been cultured. For example, primary CD34+ cells with low or undetectable CD38 expression (CD34+CD38- phenotype) are highly enriched for hematopoietic stem cells and primitive progenitor cells, but CD34+CD38- phenotype of cultured cells may not be as primitive.

**ASSESSMENT OF HEMATOPOIETIC CELLS**

Assessment of CD34+ cells before and after culture may be performed by flow cytometry using the following fluorochrome-conjugated antibody clones:
   - Anti-Human CD34 Antibody, Clone 581 (Catalog #60013) or Clone 563 (Catalog #60119) or Clone 8G12 (Catalog #60121)
   - Anti-Human CD45 Antibody, Clone HI30 (Catalog #60018) or Clone 2D1 (Catalog #60123)
   - Anti-Human CD38 Antibody, Clone AT-1 (Catalog #60131) or Clone HIT2 (Catalog #60014)
   - Anti-Human CD90 Antibody, Clone 5E10 (Catalog #60045)
