

Small Molecules

A 83-01

Activin/NODAL/TGF- β pathway inhibitor; Inhibits ALK5, ALK4, and ALK7

Catalog #	72022	5 mg
	72024	10 mg
	100-0245	50 mg
	100-1041	150 mg

Product Description

A 83-01 is a potent inhibitor of activin receptor-like kinase (ALK) including ALK5 (type I transforming growth factor- β receptor), ALK4 (type IB activin receptor), and ALK7 (type I NODAL receptor) with IC_{50} = 12, 45, and 7.5 nM, respectively (Tojo et al.).

Molecular Name:	A 83-01
Alternative Names:	Not applicable
CAS Number:	909910-43-6
Chemical Formula:	$C_{25}H_{19}N_5S$
Molecular Weight:	421.5 g/mol
Purity:	$\geq 95\%$
Chemical Name:	3-(6-methylpyridin-2-yl)-N-phenyl-4-quinolin-4-ylpyrazole-1-carbothioamide
Structure:	

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect from prolonged exposure to light. For long-term storage, store with a desiccant. Stable as supplied for 12 months from date of receipt.
Solubility:	· DMSO ≤ 30 mM · Absolute ethanol ≤ 500 μ M For example, to prepare a 10 mM stock solution in DMSO, resuspend 1 mg in 237 μ L of DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

MAINTENANCE AND SELF-RENEWAL

- Facilitates the conversion of epiblast stem cells to the naïve pluripotent state (Li et al.; Zhou et al.).

REPROGRAMMING

- In combination with PD0325901 (Catalog #72182), enables OCT4-mediated reprogramming (Zhu et al.).

DIFFERENTIATION

- Inhibits mesoderm and endoderm specification (Zhang et al.).
- Disrupts epithelial to mesenchymal transition through inhibition of the SMAD signaling pathway (Tojo et al.).
