Product Description

The SARS-CoV-2 (ORF3a) Peptide Pool is a lyophilized mixture of 66 peptides from open reading frame 3a (ORF3a) protein of SARS-CoV-2. ORF3a is found in both SARS-CoV and SARS-CoV-2 and the two proteins share high sequence similarity. SARS-CoV ORF3a has been shown to cause apoptosis of infected cells (Ren et al.) and form potassium-sensitive ion channels, modulating the release of viruses (Lu et al.). Additionally, it induces ligand-independent downregulation of Type 1 interferon receptor (Minakshi et al.). The sequence similarity between the two proteins suggests it may play a similar role in SARS-CoV-2. The pool consists of 15-mer peptides with 11-amino-acid overlaps that cover amino acids 1 - 275 on SARS-CoV-2 ORF3a.

Preparation and Storage

Storage:	Store at -20°C.
Stability:	Stable as supplied until expiry date (EXP) on label.
Preparation:	Warm to room temperature (15 - 25°C) before reconstitution. Add pure dimethyl sulfoxide (DMSO; ~40 µL) and dilute with water to the desired concentration. Final concentration of DMSO must be below 1% (v/v) to avoid toxicity in the biological system. If not used immediately, aliquot and store at -20°C. Protect from light. After thawing aliquots, do not re-freeze.
