**Product Description**

The G10F5 antibody reacts with CD66b (previously denoted CD67), an ~95 kDa single-chain glycosylphosphatidylinositol (GPI)-linked glycoprotein expressed by neutrophilic and eosinophilic granulocytes. CD66b is a member of the carcinoembryonic antigen (CEA)-like subfamily of proteins within the immunoglobulin superfamily and possesses two Ig-like C2-type domains and one Ig-like V-type domain. In neutrophils, CD66b is localized within granules in the cytoplasm as well as being expressed on the plasma membrane. Surface expression levels increase upon granulocyte activation, an effect induced by stimulators such as phorbol myristate acetate (PMA), calcium ionophore and N-formylmethionyl-leucyl-phenylalanine (FMLP). CD66b appears to play a role as a signaling receptor involved in cell adhesion, phagocytosis and chemotaxis by regulating granulocyte activation and adhesion to several proteins, including CD66c, galectin-3, fibronectin and E-selectin.

**Target Antigen Name:** CD66b  
**Alternative Names:** Carcinoembryonic antigen-related cell adhesion molecule 8, CD67, CEACAM8, CGM6, NCA-95  
**Gene ID:** 1088  
**Species Reactivity:** Human, Chimpanzee  
**Host Species:** Mouse  
**Clonality:** Monoclonal  
**Clone:** G10F5  
**Isotype:** IgM, kappa  
**Immunogen:** Human granulocytes  
**Conjugate:** FITC

**Applications**

**Verified:** FC  
**Reported:** FC  
**Special Applications:**

**Properties**

**Formulation:** Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) bovine serum albumin  
**Purification:** The antibody was conjugated with FITC under optimal conditions, and is at > 85% purity. The solution is free of unconjugated FITC.  
**Stability and Storage:** Product stable at 2 - 8°C when stored undiluted. Do not freeze. Protect product from prolonged exposure to light. For product expiry date, please contact techsupport@stemcell.com.  
**Directions for Use:** For flow cytometry the suggested use of this antibody is 5 μL per 1 x 10e6 cells in 100 μL volume or per 100 μL of whole blood. It is recommended that the antibody be titrated for optimal performance for each application.
Antibodies

Data

(A) Flow cytometry analysis of human whole blood nucleated cells labeled with Anti-Human CD66b Antibody, Clone G10F5, FITC (filled histogram) or a mouse IgM, kappa FITC isotype control antibody (black line histogram).

(B) Flow cytometry analysis of human whole blood nucleated cells processed with the EasySep™ Whole Blood CD66b Positive Selection Kit and labeled with Anti-Human CD66b Antibody, Clone G10F5, FITC. Histograms show labeling of whole blood nucleated cells (Start) and isolated cells (Isolated). Labeling of start cells with a mouse IgM, kappa FITC isotype control antibody is shown (open histogram).

(C) Flow cytometry analysis of human buffy coat nucleated cells processed with the EasySep™ HLA Whole Blood CD15 Positive Selection Kit and labeled with Anti-Human CD66b Antibody, Clone G10F5, FITC. Histograms show labeling of buffy coat nucleated cells (Start) and isolated cells (Isolated). Labeling of start cells with a mouse IgM, kappa FITC isotype control antibody is shown (open histogram).
