Catalog # 05490

50 mL

Product Description

MesenCult™-ACF Freezing Medium is a defined, serum-free, and animal component-free medium for the cryopreservation of mesenchymal stem and progenitor cells (MSCs). This complete and ready-to-use medium is recommended for human MSCs previously cultured in MesenCult™-ACF Medium (Catalog #05440), MesenCult™-XF Medium (Catalog #05420), or MesenCult™ Medium (MesenCult™ Proliferation Kit; Catalog #05411). Frozen human MSCs should be stored at -135°C (liquid nitrogen) or colder.

- Defined, serum-free, and animal component-free
- Reproducibly high recovery rates
- Optimized for MSCs previously cultured in MesenCult™-ACF, MesenCult™-XF, or MesenCult™ medium
- Preserves human MSC multipotency and expansion capacities
- Convenient, ready-to-use format

Properties

Storage: Store at 2 - 8°C.

Shelf Life: Stable until expiry (EXP) date on label.

Contains: Dimethyl sulfoxide (DMSO)

Please refer to the Safety Data Sheet (SDS) for hazard information.

Handling / Directions For Use

FREEZING

1. Wipe down the outside of the MesenCult™-ACF Freezing Medium container with 70% ethanol or isopropanol before opening.
2. Prepare a single-cell suspension of human MSCs using the desired dissociation medium (e.g. MesenCult™-ACF Dissociation Kit; Catalog #05426) and centrifuge cells at 300 x g for 5 minutes to obtain a cell pellet.
3. Carefully remove the supernatant with a pipette, leaving a small amount of medium to ensure the cell pellet is not disturbed. Resuspend the cell pellet by gently flicking the tube.
4. Add cold (2 - 8°C) MesenCult™-ACF Freezing Medium to obtain a cell suspension of 1×10^6 cells/mL and mix thoroughly.
5. Transfer 1 mL of the cell suspension into each cryovial.
6. Freeze cells using a standard slow rate-controlled cooling protocol (approximately -1°C/minute) or an isopropanol freezing container and store at liquid nitrogen temperature (-135°C).

NOTE: Long-term storage at -80°C is not recommended.

THAWING

For complete instructions on how to culture MSCs using a specific culture medium, please refer to the Product Information Sheet for the medium (e.g. MesenCult™-ACF; Document #28066, or MesenCult™-XF; Document #29919).

NOTE: When serum-free medium is used, pre-coating of the cultureware is generally required. Cultureware should be prepared in advance according to the supplier's instructions and brought to room temperature (15 - 25°C) for at least 30 minutes prior to use.

1. Warm DMEM/F-12 with 15 mM HEPES (Catalog #36254) and desired culture medium (e.g. MesenCult™-ACF or MesenCult™-XF) in a 37°C water bath.
2. Wipe the outside of the vial of cells with 70% ethanol or isopropanol.
3. In a biosafety cabinet, twist the cap a quarter-turn to relieve internal pressure and then retighten.
4. Quickly thaw cells in a 37°C water bath by gently shaking the vial. Remove the vial when a small frozen cell pellet remains. Do not vortex cells.
5. Wipe the outside of the vial with 70% ethanol or isopropanol.
6. Transfer cells to a 15 mL polypropylene tube (e.g. Fisher Catalog #05-539-5) containing 10 mL of warm DMEM/F-12.
7. Centrifuge cells at 300 x g for 5 minutes at room temperature (15 - 25°C).
8. Carefully remove the supernatant with a pipette, leaving a small amount of medium to ensure the cell pellet is not disturbed. Resuspend the cell pellet by gently flicking the tube.
9. Add 2 mL of culture medium to the tube. Mix gently.
10. Plate cells into pre-coated cultureware (e.g. T-75 cm² flask or 6-well plate).

NOTE: In general, one frozen cryovial containing 1 x 10⁶ human MSCs can be successfully thawed into one T-75 cm² flask or plated at 15,000 - 40,000 cells/well of a 6-well plate.

11. Move the cultureware in several quick, short, back-and-forth and side-to-side motions to evenly distribute the MSCs across the surface. Place the cultureware in a 37°C incubator.

STEMCELL TECHNOLOGIES INC.'S QUALITY MANAGEMENT SYSTEM IS CERTIFIED TO ISO 13485. PRODUCTS ARE FOR RESEARCH USE ONLY AND NOT INTENDED FOR HUMAN OR ANIMAL DIAGNOSTIC OR THERAPEUTIC USES UNLESS OTHERWISE STATED.
