Product Description

LY294002 is a phosphoinositide 3-kinase (PI3K) inhibitor that has greater potency and selectivity than Quercetin (Catalog #73932), the structure on which it is based. LY294002 inhibits PI3K ($IC_{50} = 1.4 \mu M$) and also shows activity against casein kinase 2 (CK2), but not PI4K, EGFR, PDGFR, MAPK, PKA, or PKC (Davies et al.; Vlahos et al.).

Molecular Name:	LY294002
Alternative Names:	Not applicable
CAS Number:	154447-36-6
Chemical Formula:	$C_{19}H_{17}NO_3$
Molecular Weight:	307.3 g/mol
Purity:	$\geq 98\%$
Chemical Name:	2-(4-morpholinyl)-8-phenyl-4H-1-benzopyran-4-one
Structure:	

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at $-20^{\circ}C$ as supplied. Protect from prolonged exposure to light. Stable as supplied for 12 months from date of receipt.
Solubility:	· DMSO ≤ 50 mM · Absolute ethanol ≤ 50 mM · PBS (pH 7.2) $\leq 160 \mu M$ For example, to prepare a 10 mM stock solution in DMSO, resuspend 5 mg in 1.63 mL of fresh DMSO.

Prepare stock solution fresh before use. Stock solutions in DMSO or ethanol are stable for up to 6 months if stored at $-20^{\circ}C$. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

MAINTENANCE AND SELF-RENEWAL

- Suppresses proliferation and self-renewal of mouse embryonic stem (ES) cells (Lianguzova et al.; Paling et al.).

DIFFERENTIATION

- Promotes differentiation to insulin-producing cells from mouse ES cells (Hori et al.).
- Inhibits myotube formation from myoblasts (Coolican et al.; Jiang et al.).
