Product Description

STEMdiff™ Neural Rosette Selection Reagent is an enzyme-free reagent for the selective detachment of neural rosette clusters from adherent neural aggregates previously generated from human embryonic stem (ES) cells and induced pluripotent stem (iPS) cells using STEMdiff™ Neural Induction Medium (Catalog #05835), without manual scraping. Collecting and re-plating rosette clusters after incubation with STEMdiff™ Neural Rosette Selection Reagent will yield highly pure populations of neural progenitor cells (NPCs), which can be further sub-cultured as single cells.

Properties

Storage: Store at 15 - 25°C.

Shelf Life: Stable until expiry date (EXP) on label.

Handling / Directions For Use

For complete instructions on induction of neural differentiation using STEMdiff™ Neural Induction Medium and STEMdiff™ Neural Rosette Selection Reagent, refer to the Technical Manual: Generation and Culture of Neural Progenitor Cells using the STEMdiff™ Neural System (Document #28782), available at www.stemcell.com or contact us to request a copy.
