**RosetteSep™ HLA Lymphoid Cell Enrichment Kit**

**Components:**
- RosetteSep™ HLA Lymphoid Cell Enrichment Cocktail (2 x 2 mL)
- RosetteSep™ DM™L Density Medium (2 x 100 mL)

**PRODUCT DESCRIPTION**

The RosetteSep™ antibody cocktail crosslinks unwanted cells in human whole blood to multiple red blood cells (RBCs), forming immunorosettes. These dense immunorosettes pellet along with the free RBCs when centrifuged over a density gradient medium such as RosetteSep™ DM™L (Catalog #15705). Desired cells are never labeled with antibody and are easily collected as a highly enriched population at the interface between the plasma and the density gradient medium.

**QUALITY CONTROL**

RosetteSep™ HLA Lymphoid Cell Enrichment Cocktail (Catalog #15271HC.1)

RosetteSep™ cell enrichment cocktails are manufactured using aseptic technique and tightly controlled processes. Each lot of RosetteSep™ cell enrichment cocktail is sterility tested according to USP methods and Quality Control performance tested in cell separation assays using human whole blood.

RosetteSep™ DM™L Density Medium (Catalog #15705)

RosetteSep™ DM™L Density Medium is manufactured using aseptic technique and tightly controlled processes. Each lot of RosetteSep™ DM™L Density Medium is sterility tested according to USP methods.

**WARNING AND PRECAUTIONS**

1. For professional users only.
2. This product is for in vitro diagnostic use.
3. Do not use cocktail or density medium if vial or bottle contents have leaked. Unused cocktail or density medium may be disposed of according to standard laboratory procedures for non-hazardous liquids.
4. These products should be handled by trained personnel observing good laboratory practices. Once these products are added to human cells, treat the suspension as potentially biohazardous. Handling of reagents and disposal of wastes should observe all local, state, or national regulations.
5. These products are potential irritants to eyes, respiratory system, and skin. These products may also be harmful if ingested. Avoid exposure through skin, eye contact, inhalation, and ingestion.

**SPECIAL MATERIALS REQUIRED BUT NOT PROVIDED**

Recommended Medium

Phosphate buffered saline with 2% fetal bovine serum (PBS + 2% FBS, Catalog #07905).

**STORAGE AND STABILITY**

**RosetteSep™ HLA Lymphoid Cell Enrichment Cocktail**

Store at 2 - 8°C. This product may be shipped at 15 - 25°C, but should be refrigerated upon receipt. Do not freeze. Product stable at 2 - 8°C until expiry date (EXP) on label.

**RosetteSep™ DM™L Density Medium**

Store at 15 - 25°C. Storage at 2 - 8°C is acceptable, but ensure that the medium equilibrates to 15 - 25°C and invert bottle to mix contents before use. Keep protected from direct light. Product stable at 15 - 25°C until expiry date (EXP) on label.

**HANDLING AND DIRECTIONS FOR USE**

Ensure that blood sample, recommended medium (see Special Materials Required but Not Provided), RosetteSep™ DM™L, and centrifuge are all at room temperature (15 - 25°C).

1. Aliquot 10 mL of whole blood into a 50 mL tube. If desired, retain a small aliquot of whole blood (e.g. for 10 mL of whole blood, add 500 µL of cocktail). Mix well.
2. Add RosetteSep™ HLA Cocktail at 2 x 2 mL of RosetteSep™ HLA Lymphoid Cell Enrichment Cocktail and centrifuge at 330 x g for 25 minutes at 20°C.
3. Incubate 20 minutes at room temperature (15 - 25°C).
4. Dilute sample with an equal volume of PBS + 2% FBS and mix gently.
5. Layer the diluted sample on top of 10 mL of RosetteSep™ DM™L Density Medium (Catalog #15705). Be careful to minimize mixing of density medium and sample.
6. Centrifuge for 25 minutes at 330 x g (see “Notes”) at room temperature (15 - 25°C), with the brake off.
7. Remove the enriched cells from the RosetteSep™ DM™L Density Medium: plasma interface. Note: It is sometimes difficult to see the cells at the interface, especially when very rare cells are enriched. It is advisable to remove some of the density medium along with the enriched cells in order to ensure optimal recovery.
8. Wash enriched cells with PBS + 2% FBS.
9. Use enriched cells as desired. If you wish to evaluate the cell purity by flow cytometry, we recommend lysing both the start and enriched samples with ammonium chloride to remove residual RBCs (this can be done as the wash step).
ROSETTESEP™ PROCEDURE

Numbers refer to steps in Handling and Directions for Use.

2

Unwanted cells are crosslinked to RBCs (rosetted) with RosetteSep™ Tetrameric Antibody Complexes

NOTES

Density Medium
RosetteSep™ DM-L Density Medium has been formulated to optimize lymphoid cell recovery. Using a different density medium may cause cell loss.

Conversion of g to RPM
To convert g to rpm, use the following formula:

\[
RPM = \sqrt{\frac{RCF}{(1.118 \times 10^7) \times (Radius)}}
\]

Where:
- RPM = centrifuge speed in revolutions per minute
- RCF = relative centrifugal force (g)
- Radius = radius of rotor (cm)

Assessing Purity
Purity of lymphoid (CD3⁺) cells can be measured by flow cytometry after staining with a fluorochrome-conjugated anti-CD3 antibody (e.g. Anti-Human CD3, Clone UCHT1, Catalog #60011), or a combination of other lymphoid cell specific antibodies.

To reduce non-specific antibody binding, add normal human serum to all flow cytometry samples (start and enriched) prior to the addition of the antibody stain, at a concentration of 2 µL human serum/100 µL cells.

Typical Results
These results are for illustrative purposes only. They were obtained using samples from normal, healthy adults. Results from individual patient samples may vary.
