Product Description

Kenpaullone is an ATP-competitive inhibitor of several cyclin-dependent kinases (CDKs) as well as glycogen synthase kinase 3β (GSK-3β; Bain et al.; Leclerc et al.; Zaharevitz et al.). It inhibits GSK-3β, Cdk1/cyclin B, Cdk2/cyclin A, Cdk5/p25, and lymphocyte kinase with IC_{50} values of 0.23, 0.4, 0.68, 0.85, and 0.47 µM, respectively (Bain et al.; Zaharevitz et al.).

Molecular Name:	Kenpaullone
Alternative Names:	9-Bromopaullone; NSC 664704
CAS Number:	142273-20-9
Chemical Formula:	$C_{16}H_{11}BrN_2O$
Molecular Weight:	327.2 g/mol
Purity:	≥ 98%
Chemical Name:	9-bromo-7,12-dihydro-indolo[3,2-d][1]benzazepin-6(5H)-one
Structure:	
Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect from prolonged exposure to light. For product expiry date, please contact techsupport@stemcell.com.
Solubility:	· DMSO ≤ 30 mM For example, to prepare a 10 mM stock solution in DMSO, resuspend 1 mg in 306 µL of fresh DMSO. Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application. Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

REPROGRAMMING
· Replaces Klf4 in the generation of induced pluripotent stem (iPS) cells from mouse embryonic fibroblasts (MEFs) transduced with Oct4, Sox2, and c-Myc (Lyssiotis et al.).
DIFFERENTIATION
· Enhances neuronal differentiation in rat and human neural precursor cell cultures (Castelo-Branco et al.; Lange et al.).
· Promotes survival of motor neurons derived from mouse embryonic stem (ES) cells and from Amyotrophic Lateral Sclerosis (ALS) patient iPS cells (Yang et al.).
CANCER RESEARCH
· Inhibits KLF4 expression and self-renewal in breast cancer stem cells in vitro (Yu et al.).
