Description

Isolate untouched and highly purified CD4+ T cells from rat splenocytes, lymph node, or whole blood by immunomagnetic negative selection. When using a single-cell suspension from other tissue types, this kit may require optimization.

- Fast and easy-to-use
- Up to 98% purity
- No columns required
- Isolated cells are untouched

This kit targets non-CD4+ T cells for removal with antibodies recognizing specific cell surface markers. Unwanted cells are labeled with antibodies and magnetic particles, and separated without columns using an EasySep™ magnet. Desired cells are simply poured off into a new tube. Isolated cells are immediately available for downstream applications such as flow cytometry, cell culture, or DNA/RNA extraction.

Component Descriptions

COMPONENT NAME	COMPONENT #	QUANTITY	STORAGE	SHELF LIFE	FORMAT
EasySep™ Rat CD4+ T Cell Isolation Cocktail	19642C	1 x 1 mL	Store at 2 - 8°C. Do not freeze.	Stable until expiry date (EXP) on label.	A combination of monoclonal antibodies in PBS.
EasySep™ Dextran RapidSpheres™ 50102	50102	1 x 1 mL	Store at 2 - 8°C. Do not freeze.	Stable until expiry date (EXP) on label.	A suspension of magnetic particles in water.

PBS - phosphate-buffered saline

Components may be shipped at room temperature (15 - 25°C) but should be stored as indicated above.

Sample Preparation

SPLEEN or LYMPH NODE

Disrupt spleen or lymph node in recommended medium. Remove aggregates and debris by passing cell suspension through a pre-wetted 70 µm mesh nylon strainer. Centrifuge at 120 x g for 10 minutes with the brake off. Remove the supernatant and resuspend the cells at 5 x 10⁷ nucleated cells/mL in recommended medium.

If aggregation persists, pass the cell suspension through a pre-wetted 70 µm mesh nylon strainer a second time and centrifuge again at 120 x g for 10 minutes with the brake off. Remove the supernatant and resuspend the cells at 5 x 10⁷ nucleated cells/mL in recommended medium.

Ammonium chloride treatment is not recommended when preparing the cells for separation.

Keep the cell suspension at 2 - 8°C until ready to start the cell separation protocol.

WHOLE BLOOD

Prepare a peripheral blood mononuclear cell (PBMC) suspension from whole blood by centrifugation over a density gradient medium (e.g. Lymphoprep™, Catalog #07801). For more rapid PBMC preparation, use the SepMate™ RUO (Catalog #86450/86415) or SepMate™ IVD* (Catalog #85450/85415) cell isolation tube. If platelet removal is desired, resuspend the cells in recommended medium and centrifuge at 120 x g for 10 minutes with the brake off. Carefully remove and discard the supernatant.

After preparation, resuspend the cells at 5 x 10⁷ nucleated cells/mL in recommended medium.

*SepMate™ IVD is only available in select regions where it is registered as an In Vitro Diagnostic (IVD) device for the isolation of mononuclear cells (MNCs) from whole blood or bone marrow by density gradient centrifugation. In all other regions SepMate is available as research use only (RUO).

Recommended Medium

EasySep™ Buffer (Catalog #20144), RoboSep™ Buffer (Catalog #20104), or PBS containing 2% fetal bovine serum (FBS) and 1 mM EDTA. HBSS, Modified (Without Ca⁺⁺ and Mg⁺⁺; Catalog #37250) can be used in place of PBS. Medium should be free of Ca⁺⁺ and Mg⁺⁺.

Directions for Use – Manual EasySep™ Protocols

See page 1 for Sample Preparation and Recommended Medium. Refer to Tables 1 and 2 for detailed instructions regarding the EasySep™ procedure for each magnet.

3	Vortex RapidSpheres™. NOTE: Particles should appear evenly dispersed.	30 seconds	
4	Load the carousel.	Follow on-screen prompts	
	Start the protocol.	Press the green "Run" button	
5	Unload the carousel when the run is complete.	Isolated cells are ready for use	

Notes and Tips

RAT STRAINS

This kit has been verified for use with the Sprague Dawley and Wistar rat strains and is expected to also be compatible with other strains.

OPTIONAL ADDITIONAL SEPARATION

Completing a second round of separation will, on average, improve the purity up to 10% but may reduce recovery by 5 - 15%.

ASSESSING PURITY

For purity assessment of CD4+ T cells by flow cytometry use the following fluorochrome-conjugated antibodies:

- Anti-rat CD3 antibody, and
- Anti-rat CD4 antibody

Data

Starting with rat splenocytes, the CD4+ T cell content (CD3+CD4+) of the isolated fraction is typically 97.8 ± 0.8% (mean ± SD using the purple EasySep™ Magnet with the optional additional separation). In the above example, the purities of the start and final isolated fractions are 36.4% and 98.1%, respectively.
