Product Description

Shz-1 is a cell-permeable, sulphonyl hydrazone (Shz) compound that activates cardiac differentiation through induction of genes such as Nkx2.5 (Sadek et al.).

Molecular Name:	Shz-1
Alternative Names:	Sulfonylhydrazone-1
CAS Number:	326886-05-9
Chemical Formula:	C ₁₃ H ₁₁ BrN ₂ O ₃ S
Molecular Weight:	355.2 g/mol
Purity:	≥ 98%
Chemical Name:	2-[(5-bromo-2-hydroxyphenyl)methylene]hydrazide-benzenesulfonic acid
Structure:	

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect from prolonged exposure to light. Stable as supplied for 12 months from date of receipt.
Solubility:	· DMSO ≤ 80 mM · Absolute ethanol ≤ 80 mM For example, to prepare a 10 mM stock solution in DMSO, resuspend 10 mg in 2.82 mL of DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

DIFFERENTIATION

- Promotes cardiac differentiation in mouse induced pluripotent stem cells (Quattrocchi et al.).
- Induces cardiac differentiation of human mobilized peripheral blood mononuclear cells; these cells enhance myocardial regenerative repair when injected in a cryo-injured rat heart model (Sadek et al.).
