Product Description

Hyaluronidase is a polysaccharidase consisting of a single polypeptide chain of 450 amino acid residues and contains four disulfide bonds. Hyaluronidase is glycosylated and contains 5% mannose and 2.17% glucosamine (Borders & Raftery). Hyaluronidase cleaves endo-N-acetylhexosaminic bonds in hyaluronic acid and chondroitin sulfate A and C to tetrasaccharide residues, as hyaluronic acid and chondroitin sulfate are often found in connective tissues. Hyaluronidase is frequently used with other proteases such as collagenase.

Product Information

Alternative Names:	Chondroitinase; Hyaluronate 4-glycanohydrolase; Hyaluronoglucosaminidase
Format:	Lyophilized powder
Storage:	Store at -20°C.
Stability:	Stable as supplied for 12 months from date of receipt.
Reconstitution:	Dissociation reagents can be reconstituted in a balanced salt solution or buffer of choice.
Molecular Weight:	55 - 61 kDa
CAS Number:	37326-33-3
Optimum pH:	4.5 - 6.0
Cleavage Site:	Hyaluronidase randomly cleaves the 1,4-linkages between 2-acetamido-2-deoxy-b-D-glucose and D-glucose residues in hyaluronate.

Cleavage site of Hyaluronidase

Specifications

Source:	Bovine testes
Activity:	≥ 300 units/mg dry weight. See Notes for further information.

Notes

ACTIVITY UNITS

1 unit is based on the change in absorbency (turbidity) at 540 nm of an internal standard assayed concurrently with each lot.
