Product Description

Cardiotrophin-1 is a member of the IL-6 (interleukin 6) cytokine family that includes IL-6, leukemia inhibitory factor (LIF), oncostatin M (OSM), and ciliary neurotrophic factor (CNTF). Cardiotrophin-1 is a pleiotropic cytokine with activity that overlaps with other IL-6 family members. Cardiotrophin-1 is expressed in various tissues including heart, skeletal muscle, liver, lung, kidney, ovary, colon, and prostate. It initiates downstream signaling pathways through the heterodimerization of gp130 and the LIF receptor β subunit (Pennica et al.; Robledo et al.). Binding of cardiotrophin-1 initiates signaling through the JAK/STAT, MEK/ERK, and AKT pathways. Cardiotrophin-1 has been shown to have cardioprotective and neuroprotective effects. It has also been shown to promote cardiomyocyte survival and plays an essential role in the development of neural tissue (López-Yoldi et al.).

Product Information

Alternative Names: CT-1, CTF1
Accession Number: Q16619
Amino Acid Sequence: SRREGSLEDP QTDSVSLLP HLEAKIRQTH SLAHLTTKYA EQLLOEYVQL QGDPFLPSF SPPRLPVAGL SAPAPSHAGL PVHERLRLDA AALAALPPLL DAVCRRQAEI NRPAPRLLLR LEDAARQARA LGAAVEALLA ALGAANRGPR AEPPAAATASA ASATGVFPAG VLGLRVCGLY REWLSRTEGD LGQLLPGGSA
Predicted Molecular Mass: 21.1 kDa
Species: Human
Cross Reactivity: Reported to be species-specific
Formulation: Lyophilized after dialysis against phosphate-buffered saline.
Source: CHO

Specifications

Activity: The specific activity is ≥ 2.5 x 10^6 units/mg (EC50 ≤ 0.4 ng/mL) as determined by a cell proliferation assay using TF-1 cells.
Purity: ≥ 95%
Endotoxin Level: Measured by kinetic Limulus amebocyte lysate (LAL) analysis and is ≤ 0.2 EU/μg protein.

Preparation and Storage

Storage: Store at -80°C.
Stability: Stable as supplied for 12 months from date of receipt.
Preparation: Centrifuge vial before opening. Reconstitute the product in sterile water to at least 0.1 mg/mL by pipetting the solution down the sides of the vial. Do not vortex. As a general guide, do not store at 2 - 8°C for more than 1 week or at -20°C for more than 2 months. Avoid repeated freeze-thaw cycles.
(A) The biological activity of Human Recombinant Cardiotrophin-1 was tested by its ability to promote the proliferation of TF-1 cells. Cell proliferation was measured using a fluorometric assay method. The EC50 is defined as the effective concentration of the growth factor at which cell proliferation is at 50% of maximum. The EC50 in the example above is less than 0.4 ng/mL.

(B) 2 μg of Human Recombinant Cardiotrophin-1 was resolved with SDS-PAGE under reducing (+) and non-reducing (-) conditions and visualized by Coomassie Blue staining. Human Recombinant Cardiotrophin-1 has a predicted molecular mass of 21.1 kDa.
