**Product Description**

Interleukin 5 (IL-5) is a member of the short-chain 4-α-helical bundle subset of hematopoietic cytokines. It binds to a receptor consisting of IL-5Rα, which is specific for IL-5R and common beta chain, which is shared with the receptor for IL-3 and granulocyte-macrophage colony-stimulating factor (GM-CSF; Martinez-Moczygemba & Huston). Upon binding to its receptor, IL-5 activates the JAK/STAT and MAPK pathways. IL-5 is produced by Th2 cells, eosinophils, and activated mast cells. It functions in the recruitment, activation, proliferation, and survival of eosinophils, thus playing an important role in allergic inflammation, asthma, and parasite immunity. Stimulation of eosinophils with IL-5 leads to their activation, upregulation of CD11b expression, and inhibition of apoptosis (Martinez-Moczygemba & Huston). This product is animal component-free.

**Product Information**

- **Alternative Names:** B-cell differentiation factor I, EDF, Eosinophil colony-stimulating factor, Eosinophil differentiation factor, Interleukin-5, T-cell replacing factor, TRF
- **Accession Number:** P05113
- **Amino Acid Sequence:** MIPEITPSA LVKETLALLS THRTLLIANE TLRPVPVHK NHQLCTEEIF QGIGTLESQT VQGGTVERLF KNLSLKKYI DGQKKKCGEE RRRVNQFLDY LQEFLGVMNT EWIES
- **Predicted Molecular Mass:** 13.3 kDa monomer; 26.6 kDa dimer
- **Species:** Human
- **Cross Reactivity:** Reported to be species-specific
- **Formulation:** Lyophilized from a sterile-filtered solution containing sodium glycinate, pH 8.5.
- **Source:** E. coli

**Specifications**

- **Activity:** The specific activity is ≥ 4.0 x 10^6 units/mg (EC50 ≤ 0.25 ng/mL) as determined by a cell proliferation assay using TF-1 cells.
- **Purity:** ≥ 95%
- **Endotoxin Level:** Measured by kinetic Limulus amebocyte lysate (LAL) analysis and is ≤ 1 EU/μg protein.

**Preparation and Storage**

- **Storage:** Store at -20°C to -80°C.
- **Stability:** Stable as supplied for 12 months from date of receipt.
- **Preparation:** Centrifuge vial before opening. Reconstitute the product in sterile water to at least 0.1 mg/mL by pipetting the solution down the sides of the vial. Do not vortex.

OPTIONAL: After reconstitution, if product will not be used immediately, dilute with concentrated bovine serum albumin (BSA) to a final BSA concentration of 0.1%. The effect of storage of stock solution on product performance should be tested for each application. As a general guide, do not store at 2 - 8°C for more than 1 month or at -80°C for more than 3 months. Avoid repeated freeze-thaw cycles.
(A) The biological activity of Human Recombinant IL-5, ACF was tested by its ability to promote the proliferation of TF-1 cells. Cell proliferation was measured using a fluorometric assay method. The EC50 is defined as the effective concentration of the cytokine at which cell proliferation is at 50% of maximum. The EC50 in the example above is 0.166 ng/mL.

(B) 1 μg of Human Recombinant IL-5, ACF was resolved with SDS-PAGE under reducing (+) and non-reducing (-) conditions and visualized by Coomassie Blue staining. Human Recombinant IL-5, ACF has a predicted molecular mass of 26.6 kDa (13.3 kDa per monomer).
